Assignment 2

IND320

Sigvard Bratlie

https://github.com/sigvardbratlie/ind320

https://ind320-5agwbrnjhzksxs7oqz7ksl.streamlit.app/

Al-usage

Used for content refinement (spelling, syntax debugging) and structuring/drafting log entries.

Especially helpful for issues related to cassandra-spark connection errors.

LOG

I retrieved hourly production data for all price areas from Elhub (endpoint: PRODUCTION_PER_GROUP_MBA_HOUR) for the full year 2021. Because the API has limits on time windows per request, I looped over valid intervals and extracted only the productionPerGroupMbaHour list. All timestamps are handled in UTC to avoid confusion. The raw records are converted to a DataFrame for cleaning and pre-processesing before storage.

For local storage I use Cassandra with Spark as the read/write layer. I define the keyspace and table schema, write the hourly time series, and verify the load with a simple select / show(). For the analysis part, I use Spark to select exactly the required columns: priceArea, productionGroup, startTime, and quantityKwh. I then convert to pandas for plotting and quick transformations. The pie chart aggregates total annual production per group for a chosen price area. The line plot is explicitly filtered to January (the first month), with one line per production group. This corrects my earlier version that inadvertently summarized across the whole year.

Data is then pushed to a remote MongoDB. I perform a straightforward <code>insert_many</code>. On page 4 of the app, I connect to MongoDB via <code>st.secrets</code> (to avoid exposing credentials on GitHub). The layout uses two columns with <code>st.columns</code>. The left column contains a <code>st.radio</code> to select the price area and displays the same pie chart logic as in the notebook. The right column uses <code>st.pills</code> to include/exclude production groups and a single-month selector; the combination of price area, groups, and month drives the line plot. Below the columns, I add a short <code>st.expander</code> documenting the data source.

Git workflow: I develop on a separate branch until peer review/teacher feedback and then merge into main. The notebook has clear headings for navigation, and code cells are commented for reproducibility. Before exporting to PDF/HTML, I run all cells to ensure that tables and figures render properly.

```
In [11]: import requests
  import pandas as pd
  import seaborn as sns
  import matplotlib.pyplot as plt
```

Use the Elhub API to retrieve data

```
In [12]: def get_period(month : int):
             A function to fetch a single month's data from the Elhub API.
                 month (int): The month for which to fetch data (1-12).
             Returns:
                 dict: The JSON response from the API.
             entity = "price-areas" #Fetched per price areas
             dataset = "PRODUCTION_PER_GROUP_MBA_HOUR" #Dataset to fetch
             base_url = f"https://api.elhub.no/energy-data/v0/{entity}" #Base URL for the API
             params = { #Parameters for the API request
                 "dataset": dataset,
                 "startDate": f"2021-{str(month).zfill(2)}-01", #using zfill to ensure two digits
                 "endDate": f"2021-{str(month).zfill(2)}-31"
             try:
                 response = requests.get(base_url, params=params)
                 response.raise_for_status() # Raise an error for HTTP errors
                 return response.json()
             except requests.RequestException as e:
                 print(f"Error fetching data: {e}")
         def ext_single(data):
             A function to extract the productionPerGroupMbaHour list from the API response.
                 data (dict): The JSON response from the API.
             Returns:
```

```
